Content of the MOOC

“Going Circular: The EPR Guide”:

- The need for a circular economy transition to mitigate the environmental, social, and economic impacts of plastic pollution and EPR's contribution to this transition.
- Key components of an EPR system, including the creation of a producer responsibility or-ganisation (PRO), monitoring mechanisms, and financing.
- Design principles for EPR schemes
- Context-specific factors shaping the implementation of EPR schemes: geographic, social, political aspects, as well as existing waste management capacities.
- Key aspects for the roll-out of waste management systems: the inclusion of informal economies; incentivising separation at source; ensuring collection, sorting, and recycling; as well as creating markets.
- Steps for creating EPR schemes
